

JOB DATABASE - ANALYSIS REPORT

1. Executive Summary

This report analyzes a recruitment dataset containing 12 job records from two organizations. The dataset includes job vacancies, salary information, qualification requirements, experience requirements, age limits, and hiring locations. The objective is to identify hiring trends and provide actionable recommendations for job seekers.

2. Dataset Overview

Total Records: 12

Organizations: 2 **Date Range:**

15-Apr-2025 **Total Vacancies:**

122

3. Key Findings

Vacancies by Organization

- HURL_Form: 121 vacancies
- IIT Palakad: 1 vacancy

Salary Analysis

- Highest Salary: ■25,000 (raw dataset value)
- Average Salary: ■3,591.16
- HURL advertisement mentions compensation up to **34.1 LPA** for Additional Chief Manager, indicating salary fields should be standardized before analysis.

Qualification Demand

- B.Tech: 7 positions
- MBA/PG Diploma: 1
- Diploma: 1
- B.Sc.: 1

Experience

Minimum: 2 years | Average: 8.62 years | Maximum: 16 years

Age Limits

Minimum: 30 years | Average: 35.67 years | Maximum: 44 years

Locations: 2

4. Insights

- HURL contributes more than 99% of all vacancies.
- Most openings target experienced professionals rather than fresh graduates.
- B.Tech is the most frequently requested qualification.
- Salary values are inconsistent in units (CTC/LPA/raw values), requiring data cleaning.

5. Recommendations

For Job Seekers:

1. Apply to HURL for the highest number of opportunities.
2. B.Tech graduates have the strongest hiring prospects.
3. Freshers may target IIT Palakkad opportunities.

For Data Quality:

1. Standardize salary units.
2. Validate vacancy counts and organization names.
3. Clean missing/inconsistent values before dashboard creation.

6. Conclusion

The recruitment dataset shows that HURL is the dominant recruiter with 121 vacancies. Technical qualifications, especially B.Tech, are in highest demand. Mid-level professionals with 2–16 years of experience have the best opportunities. Data cleaning—particularly salary standardization—is recommended before advanced analytics.
